ShipCenter Security Editor: include settings in search **Future Consideration**

- MT Mathias Tabor
- **Forum name:** #SalesPad Products

In ShipCenter Security Editor, please replicate the search functionality as found in SalesPad Security Editor. Currently, results are only returned for the security setting group, and not the individual settings within a group. For example, searching for "Script" in SalesPad Security Editor returns all security settings with "Script" in them, such as pre- and post-load scripts for documents. The same search for "Script" in ShipCenter only returns Script Manager, and not, for example, Shipment Editor, which has several scripts available to edit.
