Shopify Order Export Fulfillments from Multiple Locations Future Consideration

We currently are leveraging a workaround to this that requires 4 export automations for Shopify. the Location matching mapping does not allow multiple locations (warehouses) to be selected. We drop ship our ecommerce orders from our four plants across the U.S. (MI, TN, UT, NC).

I frequently find that an order may have two lines on the order and the lines were shipped from 2 different locations. this will fail in the export of the fulfillment to shopify because it is not able to match on those locations in the fulfillment.
