

# Show PO Line Distribution Account into PO Line Grid Will Not Implement

- MT Mathias Tabor

I'd like to be able to see the account number to be charged for a purchased line item in the PO Line Item Grid. Especially for non-inventory items this would help Purchasing and Accounting make sure the correct account is billed for a line item.

This could possibly be implemented by pulling that info from the Purchase Line Distribution Entry window or adding a hook for an spcp custom procedure to allow showing additional custom fields in the Grid.
