

Square Payments - Add a way to set a default authorization amount

Will Not Implement

Add a Setting or Security that allows users to set a default authorization amount that defaults instead of the full document total.

Use Case: Users will preauthorize a small amount ($0.01) to ensure the card is valid. After processing, the full on account/amount due will be captured. This prevents users from needing to manually change the amount to authorize and saves time for those users and prevent mistakes when they forget to update the field.
