Can I assign inventory in Used, Damaged, etc, when creating a return?

Megan De Freitas - 2025-06-12 - FAQ

SalesPad GP does not allow users to set item type assignments while creating a return, but instead has the Returns Warehouse setting, which returns inventory into a specific warehouse so items do not automatically get put back as sale-able inventory when the return is posted. Refer to the SalesPad GP [Returns](#) document for more information on creating returns in SalesPad GP.
