Checking eConnect Version

Megan De Freitas - 2024-11-22 - [Troubleshooting](#)

Your Dynamics GP database stores information about eConnect, including the version number. To retrieve information about eConnect, run the following stored procedure:

```
exec DYNAMICS..taeConnectVersionInfoDYNAMICS
```

It will return the database name, eConnect version, and default company name.

Screen Shot:

The screenshot shows the Microsoft SQL Server Management Studio interface. The Object Explorer on the left displays the database structure, with the 'DYNAMICS' database selected. The Query window on the right contains the SQL command: `exec DYNAMICS..taeConnectVersionInfoDYNAMICS`. The Results pane at the bottom shows the output of the query, which is a single row with the following data:

DatabaseName	Version	CompanyName
1 TWO	10.0.0.0	Fabrikam, Inc. <TEST>

The status bar at the bottom indicates that the query was executed successfully on the 'vmgp10' server, using the 'sa' user, in the 'DYNAMICS' database, and returned 1 row.
