## Does DataCollection allow site transfers between warehouses?

Megan De Freitas - 2024-11-22 - [FAQ](#)

Yes. The function is called Site Transfers in DataCollection GP Mobile.

Site Transfers moves items and quantities from warehouse to warehouse by queuing a Transfer transaction in a SalesPad GP batch in GP. These transactions, along with Inventory Adjustments, must still be posted in GP.

**Note:** There is also an Inventory Transfer function in SalesPad GP (Modules > Inventory Transfers), which queues transactions to be posted in GP.
