Extended Pack DLLs

Megan De Freitas - 2024-11-22 - Setup

The Extended Pack for SalesPad Desktop is a package of DLLs that are not part of the core offering. The Extended Pack is a one-time purchase, and the functionality is available to all users under that GP Site ID. There is a 22% yearly enhancement that is required. Current modules in the extended pack are as follows:

- Manufacturing
- Manufacturing Configurator
- AutoGlass

We will continue to expand what is in the Extended Pack and will update this list as we add modules. If the functionality you are looking for is not on the above list, then it is considered custom and will be handled on a case-by-case basis.

To install an Extended Pack DLL, simply add the DLL to all of the installation folders, run a database update, and turn on the appropriate sercurity and settings options in SalesPad Desktop.
