How do I move existing data from my database into CardControl?

Megan De Freitas - 2024-12-02 - FAQ

CardControl has a Data Migration feature that allows the user to migrate data from a SalesPad GP, SalesPad ERP and/or Dynamics GP 2010 database into the CardControl system. CardControl will not only migrate that data into its database, but it will remove any sensitive information from the old database to ensure that the user's sensitive information is safe, secure, properly encrypted, and stored in only one central location.
