

## Item Note

Megan De Freitas - 2025-06-12 - Inventory

### Overview

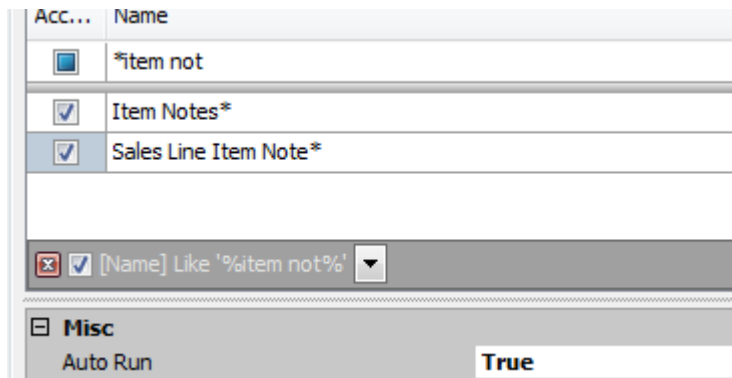

SalesPad's Item Note plugin displays notes related to an inventory item, which are created in Inventory Lookup on the sales document entry screen. Item Note can be configured to pop up when the item is added to a sales document, and can also be accessed from the

**Actions** dropdown (  ) on the sales document Line Items tab.

**Note:** This feature is available in SalesPad version 4 and later.

### Security

Sales Line Item Note must be enabled in the Security Editor. Set the Misc sub-setting *Auto Run* to True to automatically pop up the item note when an item is added to an order.

The screenshot shows a table with two columns: 'Acc...' and 'Name'. The first row has a checkbox icon and the text '\*item not'. Below this, there are two rows with checkboxes and the text 'Item Notes\*' and 'Sales Line Item Note\*'. At the bottom, there is a section labeled 'Misc' with a sub-setting 'Auto Run' set to 'True'. There is also a search bar with the text '[Name] Like \'%item not%\'' and a dropdown arrow.

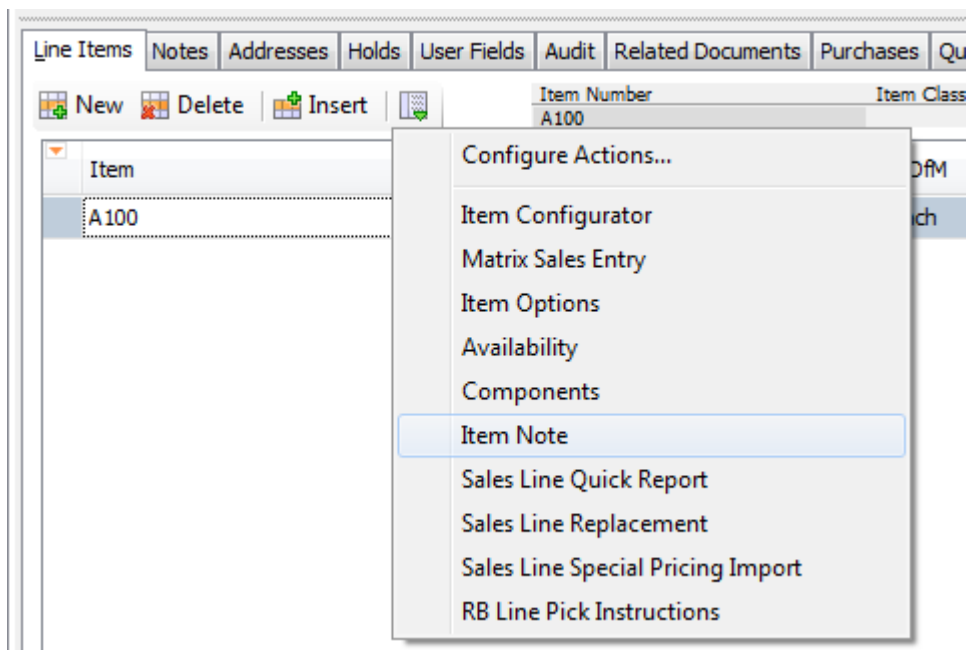

### Use

1. Create item notes in Inventory Lookup, on the Item Notes tab. Proper security required – refer to SalesPad's [Inventory Lookup](#) documentation for more information (Notes can also be created from the Item Notes tab in Inventory Analysis)
2. Open a sales document and enter a line item that has an item note. If *Auto Run* is set to True in the Security Editor, the item note will pop up:

3. Click **OK** to close the note. To see the Item Note again at any point, select the line item and select Item Note from the **Actions** dropdown:

The item note will pop up again.
