Items: Top Gainers/Decliners

Product Development - 2025-07-01 - Major Features

Description

The **Items: Top Gainers/Decliners** functionality provides a dynamic analysis tool that highlights the items with the most significant sales fluctuations between the current and comparison period. This allows users to identify which items have experienced the largest increases (Top Gainers) and the largest decreases (Top Decliners). Users have the flexibility to view these variations based on several different metrics: Margin $, Margin %, Sales $, and Quantity (per UofM).

The charted values are the variation between the current and comparison data points.

Chart

Open image-20240920-184339.png

Left Header

Toggle control for switching the Mode of the widget between viewing the top gainers or decliners.

Right Header
