Orphan Purchase Plans

Megan De Freitas - 2024-11-22 - [Troubleshooting](#)

In some cases, there may be extraneous purchase plans visible on the Choose Purchase Plan Items screen (Modules > Purchasing Advisor > Purchase)

The screenshot shows the 'Choose Purchase Plan Items' window. On the left, under 'Purchase Plans', there is a list of items. Three items are circled in red: '530367 (no vendor assigned)', '531349 (no vendor assigned)', and '531498 (no vendor assigned)'. Below these, 'GC DANMEA-730943' is highlighted. On the right, under 'Purchase Plans Items', there is a table with columns 'Item Number' and 'Item Description'. The first row has a checked checkbox, '2-4-5000-369' in the 'Item Number' column, and is empty in the 'Item Description' column. Above this table are buttons for 'Select All', 'Select None', and 'Re'. To the right of the table is a 'Create PO' button. Below the table, there are fields for 'Purchase C' and 'PO Type:'.

The selected purchase plan should correspond to the sales document number. The presence of other sales document numbers on this list indicates either other users are currently in the process of creating purchase orders, or SalesPad has crashed during the purchasing process and has not cleared the purchase plan. If the latter is true, you can delete the entries from spPurchasePlanItem with the following script:

```
delete from spPurchasePlanItem where Purchase_Plan = 'ORDSTXXXX'
```

Important Reminders and Suggestions:

- This script is considered as is and any changes/modifications that might be needed would require a signed quote.
- If you are required to change a Security Option or Setting, your users will need to restart SalesPad before the changes take effect.
- Please install this on a test machine and run it against a test database before using it on your live system.
- You should always make sure you have a database backup prior to installing new software.
- Database Triggers, after final delivery, are the responsibility of the dealer/customer. SalesPad will not be responsible for maintaining copies of custom database objects.
- C# scripts, after final delivery, are the responsibility of the dealer/customer.
