Picking Audit

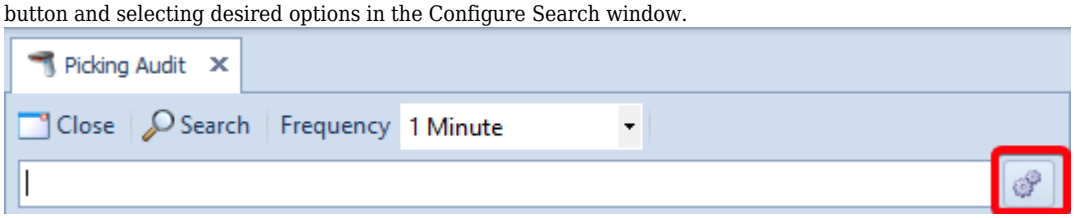

Cavallo Support - 2024-12-03 - Miscellaneous

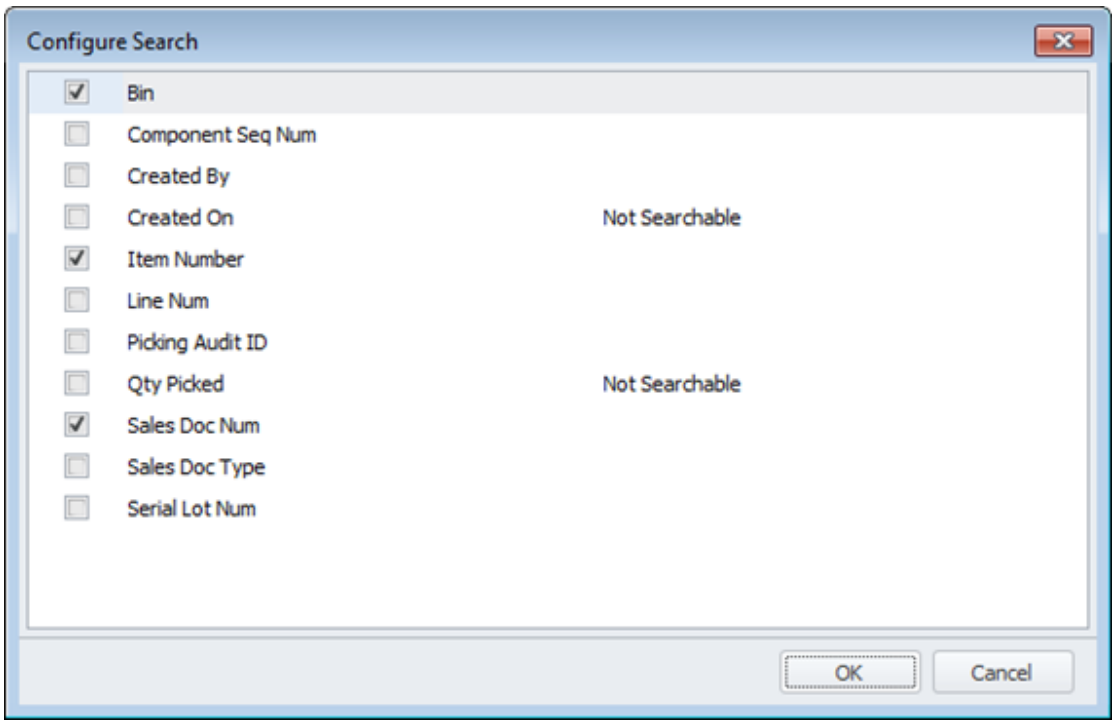

Overview

The Picking Audit module serves as an audit log that tracks picking transactions from the DataCollection mobile application.

Usage

Picking Audit displays results based on search criteria. Search criteria can be changed by clicking the **Gears** button and selecting desired options in the Configure Search window.

The refresh frequency can be set for Picking Audit using the Frequency dropdown.

Security

Picking Audit - Grants access to the Picking Audit module.
