Run Script

Megan De Freitas - 2025-06-25 - Setup

Overview

The Run Script button/plugin allows a user to execute a predetermined C# script on a sales document.

Usage

Run Script is a plugin available under the Actions dropdown () on the sales document header. Enable the *Run Script* security and paste a C# script into the *Run Script* sub-setting to activate the plugin.

	V	Run Script*								
	🗵 🔽 [Name] Like 'run%' 💌 Edit Filter									
	Misc									
	Button Text		Run Script							
Ξ	Scripts									
	Run Script									

There is an additional sub-setting called *Button Text* where users can enter a different name for the Run Script function. This name will appear instead of Run Script on the plugin.

Like any other Plugin, a button for Run Script can be shown on the header, making this new plugin visually identical to the old button. Refer to the SalesPad <u>Configure Actions and</u> <u>Display Plugins in the Sales Document Toolbar</u> documentation for information on creating the button for a plugin.

Run Script can also be added to a Workflow Queue, where it will run everytime a document is forwarded through the queue:

Workflow Queues													
🔣 New Queue 🗱 Delete Selected Queues 🕴 Resequence Queues													
Seq /	Queue	Button Caption	Next Queue(s)	Plugin	Print?	Eval	Force
