Sales Line Mass Update | SalesPad Desktop

Cavallo Support - 2025-06-05 - Video

This video discusses how to use the Sales Line Mass Update feature in SalesPad GP for Microsoft Dynamics GP. This feature is similar to the Sales Document Mass Update feature, but it focuses specifically on line items rather than the entire sales document. This feature allows users to allocate, un-allocate, update prices, and more. There are also additional Security settings for this feature, including unique pricing securities.

Additionally, users can search by eight different identifiers. The grid that the Sales Line Mass Update uses can be customized by each user independently. In this feature, the user can also see the "Percent of Inventory" in a visual display to represent how many items are being allocated out of the number available.
