

Setting Up Sample Items on Sales Documents

Megan De Freitas - 2024-11-22 - Sales

Overview

In SalesPad, you can set up sample items that are marked as sample when they show up on a sales document.

Usage

Create a new sales document. When you click **New** to add a new line item to the document, click the ellipsis (...) in the Item box.

This opens the Sales Inventory Lookup screen. In the Item search field, type the word PEN to display a list of items containing the word. Select the item PEN from the list and click the **Add as Sample** checkbox in the lower left corner of the screen.

The sample item itself is then automatically pushed into the item description in the sales line, so you will know specifically what type of sample it is.

Settings

Sample Item Number - Determines the item number to use for a sample item.
