Version 1.4.7

Release Date 11/5/26

BREAKING CHANGE: ADDED: Setting: Misc: Minimize To System Tray On Close: If set to 'True', ShipCenter will soft exit and minimize to the system tray when closed using the 'X' button in the top right of the application. (Default: False)

ADDED: Application: Added the import/export functionality to the following configuration screens: Package Templates, Country References, Shipping Methods, Shipping Sources, and Hotkey Mappings.
ADDED: Application: Unhandled exceptions are now sent to Graylog when the user clicks the Send button in the Error Submission window.
ADDED: Carrier: FedEx REST: Ability to generate access token using Cavallo API credentials.
ADDED: Carrier: FedEx REST: When Commercial Invoice and Certificate of Origin shipping documents are selected on the Shipping Documents tab under shipment options, the corresponding reports will now print after processing a shipment.
ADDED: Carrier: Stamps.com: Added support for U.S. military and diplomatic mail destinations, such as APO (Army Post Office), FPO (Fleet Post Office), and DPO (Diplomatic Post Office). Valid regions are AA (Armed Forces Americas), AE (Armed Forces Europe), and AP (Armed Forces Pacific).
ADDED: Printer Configuration: Added the ability to configure custom reports for printing. Set the Label Type to 'Custom Reports', then select individual reports in the Custom Reports column. NOTE: Custom reports need to be configured in the Report Manager before they are visible in the Custom Reports column.
ADDED: Security: Shipments: Default To Date To Current Date - When set to true, the To Date will be set to the current date.
ADDED: Settings: Stamps.com: API Payload Logging - Log Stamps.com API requests and responses to the spsc.ShipmentApiLog table. NOTE: This setting should be used for troubleshooting purposes only.

REMOVED: Carrier: FedEx REST: Removed document format options, such as Stock Type and Doc Type, from the Shipping Documents tab under shipment options. These are now set automatically when processing a shipment.

UPDATED: Application: SalesPad plugins, settings, and SMTP setup are now reloaded only when the shipping source database is different instead of the shipping source ID. This should speed up the application considerably, especially the Shipment Monitor screen.
UPDATED: Printer Configuration: The Label Type dropdown will now show only labels/reports available for the selected carrier.
UPDATED: Shipment Editor: The Print dropdown will now show only labels/reports available for the selected carrier.

FIXED: Application: ShipCenter will now launch as the topmost application.
FIXED: Carrier: Stamps.com: The CreateIndiciumResponse payload is now deserialized and logged correctly when the 'API Payload Logging' setting is enabled.
FIXED: Carrier: UPS: When using scripting to set the Quantum View Notify recipient Notification Type(s) but they are left blank, the user will not get the 'Value cannot be null' error when processing a shipment.
FIXED: Carrier: UPS REST: Users will not get the 'Cannot deserialize the current JSON array' error when processing shipments with rate modifiers. (Introduced: 1.4.3)
FIXED: Shipment Editor: Package weight and dimension unit of measure defaults will only get set when a new package is added to the shipment. After opening a shipment, existing packages will retain their saved weight and dimension units of measure.
FIXED: Shipment Monitor: Opening the Shipment Monitor screen, logging off, and starting the Shipment Monitor screen again will not throw 'An item with the same key has already been added' error message.

Version 1.4.6

Release Date 9/4/26

ADDED: Security Editor: Added the ability to reset the database version. Resetting the database version initiates the database update when logging into ShipCenter.
ADDED: Setting: FedEx REST: Automatically Apply Address Recommendations - Specify whether to automatically apply changes when address validation responds with a valid recommendation. (Default: True)
ADDED: Setting: UPS REST: Automatically Apply Address Recommendations - Specify whether to automatically apply changes when address validation responds with a valid recommendation. (Default: True)

UPDATED: Carrier: FedEx REST: Ground Economy (Smart Post) shipments are not limited to one package anymore. This resolves the 'PACKAGECOUNT.EXCEEDS.MAXIMUM: Number of packages exceeds maximum' error.

FIXED: Application: This application will always stay in the Windows taskbar after logging in.
FIXED: Application: This application will have a glowing background in the Windows taskbar after opening the app or logging in until it's focused.
FIXED: Application: ShipCenter will no longer freeze during login when the SQL Server user does not have proper tempdb permissions. Instead, the user will get an error message explaining the problem.
FIXED: Carrier: UPS REST: Updated UPS REST authentication by removing deprecated client validation and implementing authorization endpoint instead. This fixes the 'Client could not be validated' error when generating a new access token.

Version 1.4.5

Release Date 7/2/26

ADDED: Carrier: UPS REST: Added support for EU De Minimis requirements. EU De Minimis information, such as IOSS number and shipper/consignee type value, can now be entered on the new Tax tab under shipment options. NOTE: Product ID fields, such as Merchant Product ID, Manufacturer Product ID, and Standardized Product ID, will be implemented once UPS finalizes them after November 1, 2026.
ADDED: Carrier: FedEx REST: Added support for EU De Minimis requirements. EU De Minimis information can now be entered for commodities under shipment options. IOSS numbers can also be entered for the shipper/receiver under shipment options.
ADDED: Carrier Editor: Added 'Notification Settings' hyperlink field to the Carrier Editor. Shipment notifications can now be configured for each carrier. Shipment notifications configured per carrier take precedence over Shipment Editor notifications configured in the Security Editor.
ADDED: Database Update: The sppUpdateSalesDocumentLock and sppSalesDocument_Connector_PreEConnectLock stored procedures will now be automatically added to the GP company database if missing. NOTE: The procedures will not be added to the standalone ShipCenter database and will need to be applied manually.
ADDED: Security: Shipment Editor: Run Scripts - C# scripts that are executed when the Run Scripts button is clicked.
ADDED: Security: Shipment Editor: Can Delete Package - Determine if packages can be deleted. (Default: True)
ADDED: Security: Shipment Editor: Pre-User Notifications Script - C# script that is executed before shipment notifications are displayed to the user.
ADDED: Shipments: Added 'Package Count' column to the shipments grid. The column displays the total number of packages for each shipment.
ADDED: Security: Shipment Editor: Prevent Empty Packages - Prevents shipments derived from source documents from being finished when there are packages with no packed items. (Default: False)

REMOVED: Carrier: FedEx REST: Removed sales document number and PO number restrictions when populating package reference fields. Sales document number and PO number can now be set as Reference 1 and Reference 2 fields on packages.

UPDATED: Carrier: DHL Express: Unhandled exceptions when rating or processing shipments now contain the entire exception, including the inner exception and the stack trace.

FIXED: Carrier: DHL Express: Fixed 'An error occurred while sending the request' error when rating or processing shipments. Updated test and production URLs from HTTP to HTTPS.
FIXED: Carrier: DHL Express: The 'Object reference not set to an instance of an object' error will not be displayed when shipment processing fails and the HTTP response status is not 'Unauthorized' or 'Bad Request'. Instead, the error message will always show the returned response status.

FIXED: Carrier: FedEx REST: Shipment lines (packages) will now be saved successfully when processing shipments using the Shipment Monitor Bulk Ship feature.
FIXED: Carrier: UPS: The 'Est. Delivery Date' and 'Days In Transit' columns are now populated when using the ShipCenter Shipping Calculator in SalesPad. (Introduced: 1.4.3)
FIXED: Shipment Editor: Packing security, such as 'Can Pack Items In Non-Base UofM' and 'Can Delete Package', is now respected when the 'Automatic Shipment Generation Flow' setting is enabled.
FIXED: Shipment Monitor: When trying to set Shipment Monitor to Auto Start, users will no longer receive a ‘Self referencing loop detected’ error.

Version 1.4.4

Release Date 5/5/26

REMOVED: Application: Removed the SalesPad.DesignTime DLL from the ShipCenter installation.

FIXED: Application: Fixed the 'Deserialization from CodeDOM format is unsafe and has been disabled' error when printing labels and reports. Fixed the related 'Smart Printing error: Generate and Print Reports: Report scripts were found in the application while script execution is disabled' error when printing or emailing reports using Smart Printing. (Introduced: 1.4.3)

Version 1.4.3

Release Date 4/17/26

ADDED: Carrier: UPS: Added DDS Reference Number 1-5 fields to the Commodity Editor for the UPS REST API. The fields are editable when a commercial invoice or a CN22 is selected. The Due Diligence Statement (DDS) number is a unique number confirming that a due diligence statement has been successfully submitted under the EU Deforestation Regulation (EUDR).
ADDED: Security: Shipment Editor: Added the ability to copy shipments. NOTE: Consolidated shipments and in-transit transfer source documents are not currently supported.
ADDED: Security: Shipment Editor: Can Copy Shipment - Allows users to copy the current shipment. (Default: False)
ADDED: Security: Shipment Editor: Copy Shipment Script - C# script that is executed when a shipment is copied to other source documents.
ADDED: Security: Copy Shipment Source Document Handling Options - Determine shipment source document handling during shipment copy process. If more than one option is selected, the user will be prompted for selection before the shipment is copied. (Default: Select Source Document, Keep Source Document)
ADDED: Security: Shipment Editor: Copy Shipment Source Document Shipment Update - Determine whether shipment is updated from source document when a new source document is selected during shipment copy process. (Default: Update Shipment)
ADDED: Security: Shipment Editor: Close Original Shipment After Copy - Determine whether the Shipment Editor will automatically close after a shipment is successfully copied. (Default: False)
ADDED: Security: Shipment Editor: Copy Shipment Items - If enabled when a shipment is copied to other sales documents, then items will be automatically packed as well. Only items that match the original shipment's package items will be packed, and fulfilled serials/lots/bins will be assigned to packages at random. This may not match how items are physically packed and may cause issues with EDI and reporting. (Default: False)
ADDED: Security: Shipment Editor: Added the ability to bulk copy shipments. NOTE: Consolidated shipments and in-transit transfer source documents are not currently supported.
ADDED: Security: Shipment Editor: Can Bulk Copy Shipment - Allows users to copy the current shipment and package structure to other source documents. NOTE: Only sales documents are currently supported as source documents. (Default: False)
ADDED: Security: Shipment Editor: Bulk Copy Shipment Script - C# script that is executed when a shipment is copied to other source documents.
ADDED: Security: Shipment Editor: Bulk Copy Shipment Items - If enabled when a shipment is copied to other sales documents, then items will be automatically packed as well. Only items that match the original shipment's package items will be packed, and fulfilled serials/lots/bins will be assigned to packages at random. This may not match how items are physically packed and may cause issues with EDI and reporting. (Default: False)
ADDED: Security: Shipment Editor: Unpacked Items Confirmation Prompt - If enabled when a shipment is copied to other sales documents, and the original shipment's sales document has any fulfilled items that are not packed, then a prompt will tell the user that there are items left to pack and ask them to confirm that they are ready to copy the shipment. This can help prevent extra work from the user copying a shipment that is missing items. (Default: False)
ADDED: Security: Shipment Editor: Auto Finalize Shipments - When a shipment is copied to other sales

documents, then the shipments can be automatically finalized and shipping labels printed. Yes will do this automatically for all successfully copied shipments, No will not do this, and Prompt will ask the user whether they want to automatically finalize all shipments and print the shipping labels. (Default: Prompt)

UPDATED: Application: DevExpress updated to 25.1.7.
UPDATED: Application: Atlas libraries updated to 1.3.30.
UPDATED: Application: SalesPad submodule updated to 5.7.0.
UPDATED: Application: WebView2 updated to 1.0.2903.40.
UPDATED: Carrier: UPS: Updated Rating REST API version from v1 to v2409 and subversion from 1607 to 2409.
UPDATED: Carrier: UPS: Updated Shipping REST API version from v1 to v2409 and subversion from 1801 to 2205.
UPDATED: Carrier: UPS: Updated Address Validation REST API version from v1 to v2.

Version 1.4.2

Release Date 3/9/26

UPDATED: Script Editor: Disabled word wrap when editing scripts.

FIXED: Service Manager: Users will no longer receive the 'Unable to start host. System.InvalidOperationException: Cannot have two operations in the same contract with the same name, methods ProcessShipment and ProcessShipment in type SalesPad.ShipCenter.API.IShipCenter violate this rule.' error in Windows Event Viewer when starting the ShipCenter service. (Introduced: 1.4.0)
FIXED: Scripts: Scripts are compiled at runtime and cached for quicker execution. If script compilation fails for any reason, the user will receive an error message informing them of the failure; however, the script will still be cached. This caused ShipCenter to ignore uncompiled scripts on subsequent calls. This behavior has been modified so that if script compilation fails, it will not be cached and the error will be displayed to the user.

Version 1.4.1

Release Date N/A

Skipped Release

Version 1.4.0

Release Date 12/11/25

ADDED: Printer Configuration: The screen allows users to add or delete printer configurations and assign them to specific users, user groups, and workstations.
ADDED: Shipment Monitor Source Documents: Added the ability to bulk process shipments. This functionality requires a sales document to have a shipping header and packages already created in SalesPad.
ADDED: Security: Shipment Monitor Source Documents: Can Bulk Process Shipments - Determines whether the user is allowed to bulk process shipments. (Default: False)
ADDED: Shipment Monitor: Added the ability to cancel shipment creation by setting e.Cancel to true in the Generate Shipment Script.
ADDED: Carrier: UPS: Added support for processing dangerous goods/hazmat shipments.
ADDED: Carrier: UPS: Added 'Paperless Commercial Invoice' option to the Carrier Editor screen. Enabling this option prevents the commercial invoice from printing when processing international shipments.
ADDED: Setting: UPS REST: Use Address Validation - When true, the Ship To address will be validated before a shipment is rated or processed. (Default: False)
ADDED: Carrier: FedEx REST: Added support for the FedEx International Priority® Express shipment service.
ADDED: Setting: FedEx REST: Require Third Party Shipping Charges Contact Information - When True, shipping charges contact and address information is required when the shipment Account Option is set to 'Third Party'. (Default: True)
ADDED: Carrier: FedEx REST: Added the ability to select the shipping label resolution in dots per inch (DPI) on the Carrier Editor screen. Available options are 203 DPI (default) and 300 DPI. Please note that the 300 DPI resolution is only supported for the ZPLII label type.
ADDED: Carrier: FedEx REST: Added the ability to select the shipping label resolution in dots per inch (DPI) on the Printer Configuration screen. Available options are 203 DPI and 300 DPI. This configuration overrides the

label resolution set in the Carrier Editor.
ADDED: Carrier: FedEx REST: The estimated ship date and delivery days are now set after processing a shipment.

UPDATED: Installer: Updated the license agreement.
UPDATED: Shipment Monitor: The 'Qty Base UofM', 'UofM Schedule', and 'Source UofM' fields are now set from the license plate detail when generating a new shipment.

FIXED: Security: Shipment Editor: Prevent Partial Shipment: This security's dropdown menu will no longer give an "Object reference not set to an instance of an object" error when trying to open it.
FIXED: Carrier: UPS: When sending shipments to Paraguay (PY) and 'Invoice' and 'Same As Ship To' options are selected on the Customs tab, the '121449: The Sold To party's country code must be the same as the Ship To party's country code with the exception of Canada and satellite countries' error is not displayed anymore.
FIXED: Carrier: UPS: The 'Display 'Your invoice may vary...' Alert' and 'Display Negotiated Rate Notifications' settings are now respected when processing shipments. Previously, they were only respected when rating shipments.
FIXED: Shipment Editor: UPS Shipment Options: Notification types for recipients will now save and load.
FIXED: Shipment Editor: Closing a UPS shipment without making any changes to it will not lead to a prompt asking to save unsaved changes.
FIXED: Shipment Editor: Saving a shipment and then closing it will not lead to a prompt asking to save unsaved changes.
FIXED: Printing: Resolved the 'Invalid query' error when printing to a Zebra network printer.
FIXED: Shipping Source: SalesPad GP: During shipping method writeback, if there are multiple shipping methods mapped to the same shipping service, the source document is used to determine the correct one.
FIXED: Carrier: UPS: There will no longer be a "Cannot deserialize the current JSON array ... Candidate" error when validating an address with multiple address suggestions. This applies only to the UPS REST API.

Version 1.3.0.7

Release Date 11/12/25

FIXED: Shipping Source: SalesPad GP: When a shipment is saved, the source document note will now be appended to the sales document note instead of overwriting it. The source document note will only be appended if it has not already been added to the sales document note to prevent duplicating notes when the shipment is saved. This change also fixes preexisting sales document notes getting overwritten when the 'Notes' field is mapped under Write Mappings on the Shipping Source Editor screen. (Introduced 1.3.0.6)
FIXED: Shipment Editor: When a shipment is saved and the Write To option is not set to 'Do Not Write Back', freight will not be written back to the source document unless the shipment has been shipped or rated (freight).
FIXED: Carrier: FedEx: The Account Number field is now automatically populated with the default account number when creating a new shipment and the Account Option is set to 'My Account'.
FIXED: Carrier: FedEx REST: The Account Number field is now automatically populated with the default account number when creating a new shipment and the Account Option is set to 'My Account'.

Version 1.3.0.6

Release Date 10/16/25

BREAKING CHANGE: Shipping Source: SalesPad GP: When a shipment is saved, the source document note, if modified, will now override the sales document note instead of being appended to it. Existing shipment scripts may need to be updated to accommodate this change.

ADDED: Shipping Source: SalesPad GP: When a shipment is processed successfully, but the source document update fails, errors are now audited to the source document audit log. This applies to sales documents and in-transit transfers.

UPDATED: Carrier: UPS: Shipper and receiver email addresses are required for all international shipments starting November 1, 2025. The change applies to shipments requiring customs clearance for all origins and all destinations. Exceptions apply to shipments originating from or destined for Germany (DE), Poland (PL), or China (CN). Including both email addresses will remain optional for these three countries.
UPDATED: Shipment Monitor: When creating a shipment from a sales document, ShipCenter will now automatically populate the Ship To email with the shipping email from the sales document.
UPDATED: Shipping Source: SalesPad GP: Source document update errors now contain the origin of the error, such as 'Shipping Header Update Error' or 'Sales Document Update Error'.

FIXED: Shipping Source: SalesPad GP: If the source document update fails during shipment processing but succeeds when the user reruns it manually, the source document will now get updated correctly. For sales documents, this includes the actual ship date, shipping note, shipping summary audit, and forwarding to the next sales batch.
FIXED: Shipping Source: SalesPad GP: When a shipment is saved multiple times and a source sales document has an existing note, the note will not keep getting added to the sales document on each save.
FIXED: Carrier: Purolator: Users will not get the 'Invalid registered shipping account specified in shipment' error when rating and processing shipments.
FIXED: Shipment API Log: Shipment ID is now populated for all UPS log entries.

Version 1.3.0.5

Release Date 6/24/25

BREAKING CHANGE: Carrier: Stamps.com: Scripts utilizing Stamps API objects will need to be updated to support the new Stamps API version 135.

ADDED: Settings: FedEx REST: Retrieve Async Shipment Attempts - The number of attempts ShipCenter will perform when retrieving an async shipment. Shipments with 41 or more packages are considered async shipments. (Default: 3)
ADDED: Settings: FedEx REST: Retrieve Async Shipment Polling Frequency - The frequency, in seconds, that will be used when polling the API to determine shipment completion. (Default: 3)
ADDED: Carrier: FedEx REST: Shipment Editor: Added the ability to reset current or all shipment options to default values.
ADDED: Carrier: FedEx REST: Shipment Editor: Added the ability to reset package options to default values.
ADDED: Carrier: Stamps.com: On the Carrier Editor screen, the Stamps API endpoint type can now be set to Test or Production. (Default: Production)
ADDED: Carrier: Stamps.com: Added USPS Ground Advantage service type.
ADDED: Carrier: FedEx REST: Added support for the FedEx International Connect Plus® shipment service.
ADDED: Shipment API Log: The screen allows searching shipment requests and responses from carrier APIs, such as UPS and FedEx.
ADDED: Settings: UPS: API Payload Logging - Log UPS REST API requests and responses to the spsc.ShipmentApiLog table. NOTE: This setting should be used for troubleshooting purposes only.
ADDED: Settings: FedEx REST: API Payload Logging - Log FedEx REST API requests and responses to the spsc.ShipmentApiLog table. NOTE: This setting should be used for troubleshooting purposes only.

REMOVED: Carrier: Stamps.com: Removed USPS Parcel Select service type since it has been discontinued by USPS.
REMOVED: Settings: UPS: API Payload File Path - Directory where UPS REST API requests and responses will be saved (for example, C:\Temp). NOTE: This setting should be used for troubleshooting purposes only. (Introduced 1.3.0.1)
REMOVED: Settings: FedEx REST: API Payload File Path - Directory where FedEx REST API requests and responses will be saved (for example, C:\Temp). NOTE: This setting should be used for troubleshooting purposes only.

UPDATED: Carrier: Stamps.com: Updated Stamps API from version 38 to version 135.
UPDATED: Carrier: FedEx REST: When obtaining rates for international shipments and address validation is enabled, shipments are now considered international when the Ship To country code does not match the Ship From country code. This now matches address validation when processing international shipments.
UPDATED: Carrier: FedEx: When obtaining rates for international shipments and address validation is enabled, shipments are now considered international when the Ship To country code does not match the Ship From country code. This now matches address validation when processing international shipments.

FIXED: Carrier: FedEx: When the 'Use Ground Home Delivery For Residential Destinations' setting is enabled and all conditions for that setting are met, users will not get the 'Service is not allowed' error when processing international shipments.
FIXED: Carrier: FedEx REST: When the 'Use Ground Home Delivery Service For Residential Destinations' setting is enabled and all conditions for that setting are met, users will not get the 'SERVICETYPE.NOT.ALLOWED: Selected Service Type is not allowed between origin and destination. Please update and try again.' error when processing international shipments.
FIXED: Integrations: SalesPad: The address information, such as address code, address lines, city, state, zip, and country code, is now written back properly to the sales line freight item.
FIXED: Shipment Editor: Weight scale will not override previously saved package weight.
FIXED: Carrier: FedEx REST: ShipCenter will now calculate shipment amount correctly when the FedEx shipment response returns rates per shipment instead of rates per package. This applies to, but is not limited to,

FedEx Express Saver® and FedEx International Economy® shipment services.
FIXED: Carrier: FedEx REST: Shipment Editor: If label errors are returned as error codes or an HTML document instead of valid labels during shipment processing, they are now displayed to the end user instead of silently saved to the Image column in the spsc.ShipmentLineImage table.
FIXED: Shipment Monitor: Double clicking a row or clicking New Shipment will no longer, in rare instances, create a shipment for the wrong Sales Document.
FIXED: Carrier: FedEx REST: Users will not get the 'PACKAGECOUNT.LIMIT.EXCEEDS: The package count for this shipment exceeds limit' error when processing shipments with 41 or more packages.

Version 1.3.0.4

Release Date 3/19/25

ADDED: Carrier: FedEx REST: Shipment Editor: Added the ability to set Stock Type and Doc Type values for shipping document types under the Shipping Documents shipment option.
ADDED: Carrier: FedEx REST: Added Saturday Delivery option to the General tab under Shipment Options.
ADDED: Settings: Added import/export functionality to application settings.
ADDED: Shipment Editor: The current package can now be copied for this shipment by clicking the One Copy dropdown button. Package attributes, such as dimensions, weight, and carrier options, will be copied to the new package. Packed items (license plate details) will not be copied. Multiple copies can be created at once by switching the dropdown to the Many Copies dropdown option, which displays a prompt for the user to enter the number of copies to create.
ADDED: Security: Shipment Editor: Can Copy Package - Determine if packages can be copied. (Default: True)
ADDED: Security: Shipment Editor: Post-Package Copy Script - C# script that is executed after a package is copied on the Shipment Editor.

UPDATED: Application Settings: Application Settings has been renamed to Settings.
UPDATED: Application: RestSharp updated to 106.15.0.
UPDATED: Application: DevExpress updated to 24.1.5.
UPDATED: Application: Atlas Libraries updated to 1.3.24.
UPDATED: Application: SalesPad submodule to 5.5.1.
UPDATED: FedEx Carrier: The Ship Date will use the chosen date instead of the current date. NOTE: FedEx can error if the date is too far into the future. This change is for both REST and non-REST FedEx Carriers.
UPDATED: UPS Carrier: The COD checkbox is now always enabled under Shipment Options regardless of the country of origin. The collect-on-delivery (COD) validation is now handled by UPS after submitting a shipment. If the validation is unsuccessful, the user will see an error prompt: “121155: The COD option is unavailable with the selected service, UPS account type, and/or with the shipment’s origin/destination.”

FIXED: Carrier: FedEx REST: Shipment Editor: Fixed the “SHIPMENTSPECIALSERVICES.SPECIALSERVICESTYPES.NOTVALID: Combination of special services chosen are not valid for this shipment. Please update and try again.” error when processing international shipments. To avoid this error, ensure that the Freight On Value is not set under the Customs Clearance option and the Stock Type and Doc Type are set for corresponding shipping document types under the Shipping Documents option.
FIXED: Carrier: FedEx REST: Rate Comparison: Fixed the “RATE.CUSTOMCLEARANCEDETAIL.INVALID: Customs clearance detail cannot be null.” error when comparing rates.
FIXED: UPS Carrier: When using GIF as the label format, the first time printing a label will be properly rotated. NOTE: Reprinting was rotated properly. (Introduced: 1.3.0.2)
FIXED: Shipping Label: The default when print previewing is now 8" instead of 8.25" to better match the 4x8 labels.
FIXED: Shipment Editor: When the Use Ground Home Delivery Service For Residential Destinations setting is enabled and all conditions are met, users will not get the “This shipment did not finish processing. Would you like to attempt to finish now?” prompt after successfully processing a shipment. This applies to FedEx and FedEx REST carriers only.

Version 1.3.0.3

Release Date 6/26/24

ADDED: Application: The log4net logging is now available when writing back freight to the source document. Logging is enabled in the SalesPad.ShipCenter.exe.config file.
ADDED: Settings: FedEx REST: Label Response Option - When set to 'LABEL', labels are returned in the shipment response. When set to 'URL_ONLY', label URLs are returned instead and labels are then retrieved in a separate API call. (Default: LABEL)

UPDATED: Service: The GetRates endpoint does not require the shipping source ID to be set when the RestrictShippingMethods flag is set to true. Note: this endpoint is utilized by the ShipCenter Shipping Calculator in SalesPad.
UPDATED: UPS Carrier: REST API processing errors now include additional information, such as inner exception and a stack trace.
UPDATED: FedEx REST Carrier: REST API processing errors now include additional information, such as inner exception and a stack trace.
UPDATED: Shipment Monitor: Loading of source documents and shipments has been improved. Source documents, especially sales documents, should now load significantly faster.
UPDATED: Application: The ApplicationName that shows in a SQL trace will now use curly brackets {} around the user name, so filtering on ApplicationName is possible. Note: the previous left bracket, [, is a SQL special character.
UPDATED: Service: Added a document not found check when attempting to create a shipment using the ProcessSingleShipment endpoint.
UPDATED: Carrier: FedEx REST: Improved error handling when processing shipping labels. Users will get an error message if the shipping label cannot be retrieved or processed.

FIXED: Service: The GetRates endpoint now takes the Ship From Address location into account when returning shipping methods.
FIXED: Service: When the RestrictShippingMethods flag is set to true, the GetRates endpoint now returns mapped shipping methods even if the default shipping service is not mapped.
FIXED: Shipment Editor: Voiding a shipment where the source sales document is void or does not exist will no longer result in a null object reference error.
FIXED: Shipment Editor: Freight will now be written back when sales line items are not fulfilled on the sales document or no items are packed and the Ship Complete setting is false. (Introduced: 1.2.0.36)
FIXED: Application: In certain situations, users would get the 'Object reference not set to an instance of an object' error when selecting rows on a grid. This error has been resolved.
FIXED: Shipment Monitor: Consolidated shipments now respect multiple shipping source workflow batches. (Introduced 1.3.0.2)
FIXED: Carrier: FedEx REST: The generic SYSTEM.UNEXPECTED.ERROR message has been replaced by the 'Recipient address requires a phone number' message when attempting to process a shipment with a blank recipient phone number.
FIXED: Carrier: FedEx REST: Customs Commodities Editor: The Number Of Pieces field now allows zero as a valid input.
FIXED: Carrier: UPS: Fixed the 'Error 10400: Invalid/Missing Authorization Code' when generating a new UPS access token from the Carrier Editor screen. (Introduced: 1.3.0.0)
FIXED: Carrier: UPS: Fixed the 'Access token not found' error when rate shopping with the legacy Web Services API. (Introduced: 1.3.0.0)
FIXED: Carrier: UPS: Fixed the 'Object reference not set to an instance of an object' error when rate shopping using the ShipCenter service. (Introduced: 1.3.0.2)

Version 1.3.0.2

Release Date 5/16/24

ADDED: Security: Shipment Monitor Source Documents: Can Generate Shipments - Determines whether the user is allowed to create new shipments. (Default: True)
ADDED: Security: Shipment Monitor Source Documents: Can Edit Shipments - Determines whether the user is allowed to edit shipments. (Default: True)
ADDED: Security: Shipment Monitor Consolidated Shipments: Can Generate Shipments - Determines whether the user is allowed to create new shipments. (Default: True)
ADDED: Security: Shipment Monitor Consolidated Shipments: Can Edit Shipments - Determines whether the user is allowed to edit shipments. (Default: True)
ADDED: Security: Shipment Monitor In Transit Transfers: Can Generate Shipments - Determines whether the user is allowed to create new shipments. (Default: True)
ADDED: Security: Shipment Monitor In Transit Transfers: Can Edit Shipments - Determines whether the user is allowed to edit shipments. (Default: True)

UPDATED: Application: DevExpress updated from version 22.2.5.0 to 23.2.3.0.
UPDATED: Application: SalesPad submodule updated from version 5.3.2 to 5.4.8.
UPDATED: Shipping Source Editor: Multiple workflow queues can now be assigned to the same Shipping Source via the Workflow Batch dropdown.
UPDATED: Sales Document Scanner Popup: The popup now respects the Can Generate Shipments and Can Edit Shipments security settings from the Shipment Monitor Source Documents, Shipment Monitor Consolidated Shipments, and Shipment Monitor In Transit Transfers screens.

UPDATED: Shipment Editor: When the Finish Shipment button is clicked, the shipment is now saved before being sent to the carrier for processing.
UPDATED: Carrier: GSO: Updated exception handling to prevent “Object reference not set to an instance of an object” errors when voiding shipments.

FIXED: Carrier: FedEx REST: Generating a token no longer requires saving the carrier first after entering an API key and Secret Key. (Introduced: 1.3.0.0)
FIXED: Carrier: FedEx REST: Viewing the access token information no longer requires saving the carrier first. (Introduced: 1.3.0.0)
FIXED: Carrier: FedEx REST Freight: Generating a token no longer requires saving the carrier first after entering an API key and Secret Key. (Introduced: 1.3.0.0)
FIXED: Carrier: FedEx REST Freight: Viewing the access token information no longer requires saving the carrier first. (Introduced: 1.3.0.0)
FIXED: Application: Improved the WebView2 Runtime installation check when opening a web browser: the user can continue opening the browser even if he/she declines to download and install the WebView2 Runtime.
FIXED: Report Manager: Fixed the “DataSet didn't compile. Consider clearing the DataSet” error when opening and designing the BOL and Bare Bones Shipping Label printed reports.
FIXED: Application: There will no longer be a potential hard crash when saving, processing, and voiding shipments.
FIXED: Shipment Editor: Users will not get the “Smart Printing error: Smart Printing Smtp Exception: Email was not sent. Could not load file or assembly System.Memory, Version=4.0.1.1” error when forwarding a sales document through workflow and running the Smart Printing plugin.
FIXED: Shipment Editor: Users will not get the “Smart Printing error: Smart Printing Smtp Exception: Email was not sent. Could not load file or assembly System.Runtime.CompilerServices.Unsafe, Version=4.0.4.1” error when forwarding a sales document through workflow and running the Smart Printing plugin.

Version 1.3.0.1

Release Date 3/20/24

ADDED: FedEx REST Freight Carrier: Added the new FedEx REST Freight carrier with support for the FedEx REST API.
ADDED: Carrier: FedEx REST: Shipments can now be marked for FedEx One Rate pricing by selecting “One Rate” in Shipment Options on the Shipment Editor screen.
ADDED: Shipment Monitor: Added an Edit Shipment button that opens the selected existing shipment in the lower grid for editing. This was already available in a less obvious way by double-clicking a shipment in that grid.
ADDED: Settings: UPS: API Payload File Path - Directory where UPS REST API requests and responses will be saved (for example C:\Temp). NOTE: This setting should be used for troubleshooting purposes only.

UPDATED: Application: After successfully logging into ShipCenter, a UPS access token expiration reminder will be shown to the user seven days before the token expires.
UPDATED: Rate Comparison: The Est Delivery Date column is now populated with the estimated delivery date for FedEx and FedEx REST carriers.
UPDATED: Shipments: The Est Delivery Date and Delivery Days columns are now populated with the estimated delivery date and transit time in days for FedEx and FedEx REST carriers.
UPDATED: Licensing: Licenses now auto-update each day as part of the login process. This allows for new licenses and updated expiration dates to appear in the app without needing to manually clear a database table.

FIXED: Shipment Editor: The 'Error 128216: Invalid or missing international forms form type for ExcludeFromForm. Valid values are 04.' error will not be shown when processing international shipments with paperless invoices using the UPS REST API.

Version 1.3.0.0

Release Date 2/9/24

ADDED: UPS Carrier: Added support for the UPS REST API. The new API can be selected from the Carrier Editor screen.
ADDED: FedEx REST Carrier: Added the new FedEx REST carrier with support for the FedEx REST API.
ADDED: Package Editor: Added the 'Show In Source UofM' checkbox, allowing the user to view item quantities in source line units of measure.
ADDED: Security: Shipment Editor: Allow Entering Quantity Before Adding To Package - Determine if the

quantity and unit of measure can be set before adding an item to a package. Requires 'Can Pack Items In Non-Base UofM' security to be enabled in order to set the unit of measure. Requires SalesPad 5.3.12 or later if using Remote Library as the shipping source. (Default: False)
ADDED: Security: Shipment Editor: Can Pack Items In Non-Base UofM - Determine if users can pack in any allowed unit of measure for the item. Requires 'Allow Entering Quantity Before Adding To Package' security to be enabled. Requires SalesPad 5.3.12 or later if using the Remote Library as the shipping source. (Default: False)
ADDED: Security: Shipment Editor: Default Packing Quantity - Determine the default item quantity to be packed. (Default: Remaining Quantity To Pack)
ADDED: Settings: Packing: Pack Kit Instead of Components - If set to 'True', kit items will be packed instead of kit components. Warning: Enabling this setting may cause conflicts with packing in Inventory Manager and SalesPad. (Default: False)

UPDATED: Service: The endpoint that is used by SalesPad's ShipCenter Auto Complete sales document plugin now locks the sales document while ShipCenter is processing the shipment.
UPDATED: Application: Updated the ShipCenter application icon and branding.
UPDATED: Application: ShipCenter is built as an x64 application.

FIXED: Shipments: Generating a return shipment for a shipment that isn't linked to a sales document will no longer crash with an "Object reference not set to an instance of an object" error. (Introduced: 1.2.0.33)
FIXED: Security Editor: The Enable All Sub Securities and Disable All Sub Securities buttons will no longer crash with an "Object reference not set to an instance of an object" error. (Introduced: 1.2.0.36)
FIXED: Security Editor: The Enable All Sub Securities and Disable All Sub Securities buttons will no longer reset sub securities that are not True/False settings.
FIXED: Shipment Editor: Direct Image Processing Script: Having a script set and then clearing it out will no longer prevent ZPL labels from printing.
FIXED: Security Editor: Securities will now be imported correctly. (Introduced: 1.2.0.36)
FIXED: Service: Referencing sales document user fields in the Generate Shipment Script will no longer cause an object reference error when the shipment's shipping source is SalesPad Remote Library.
FIXED: Application: Command line installations will now correctly use the supplied installation directory.

Version 1.2.0.37

Release Date 8/21/23

ADDED: Security: Shipment Editor: Carrier Printer Overrides - Select a printer to print to for a specified carrier after the shipment gets processed. This overrides the default printer configured on the carrier.

FIXED: ShipCenter Installer: DevExpress v14 DLLs will no longer be included.

Version 1.2.0.36

Release Date 5/30/23

Minimum SalesPad Remote Library version: 5.2.38

ADDED: Setting: Direct Image Print Delay - Specify how long (in milliseconds) to delay each ZPL label when multiple labels are being printed. This will help ensure that the labels are printed in order by not overloading the printer with requests.
ADDED: Setting: Print Settings: Show ZPL Printer Incompatibility Warning - If set to 'True', trying to print a ZPL document to a non-Zebra printer will display a warning prompt. Defaults to 'True'. This feature was originally introduced in version 1.2.0.35 without a setting.
ADDED: Setting: Forward Only After Label Printed - If set to ‘True’, this setting will only allow sales documents to forward through workflow if no errors occur during label printing. If printing fails, then the sales document will remain in its current queue instead of forwarding to the next queue.
ADDED: Security: Shipment Editor: Suppress All Warnings - Determine shipment actions for which warning messages will not be displayed. (Default: None)
ADDED: Security: Shipment Editor: Suppress Individual Warnings - Determine specific warning messages that will not be displayed to the user. Warning messages can be complete or partial and are not case-sensitive. (Default: None)
ADDED: Security: Shipment Editor: Display Warnings As Toast Notifications - Determine whether warning messages are displayed as message prompts or less obtrusive toast notifications. (Default: False)
ADDED: ShipCenter Service: Added ProcessSpecificShipment endpoint that functions exactly like

ProcessSingleShipment, but requires an ASN number to be provided, and retrieves and processes that specific shipment.

UPDATED: Shipment Monitor: Optimizations were made to this screen to decrease the number of hits to the database it was making. This should increase the refresh speed for most users.
UPDATED: Application: DevExpress updated to version 22.2.5.
UPDATED: Application: SalesPad updated to version 5.3.2.
UPDATED: Shipments: Packing: The Item and Package grids now have Item Number as an available column. It is hidden by default and can be added with the Column Chooser.
UPDATED: Package Templates: Freight Class has been added to the grid.
UPDATED: New Package Templates: Freight Class has been added as a field.

FIXED: Shipping: Partial Invoicing: When freight is written back to the source document, the Freight amount only reflects the latest shipments since the last invoice instead of summing all related invoices.
FIXED: Service: Service endpoints which try to run scripts such as the Generate Shipment Script will not give "Value cannot be null" errors. (Introduced: 1.2.0.35)
FIXED: Shipment Monitor: When generating a new shipment for an order with an existing shipment, an out-of-memory exception will no longer occur when using the Remote Library shipping source.
FIXED: Shipment Editor: The Finish Shipment button will now become disabled after the shipment is processed the first time, instead of needing to either open and close the shipment or click the Finish Shipment button a second time.
FIXED: Shipment Editor: Ship To, Ship From (and other) clickable information labels: Information labels now disregard "&" as a hotkey-specifying character and no longer break multi-line formatting.
FIXED: Shipments: UPS: Including a space in a Canadian Postal Code on the Shipment Options Payment tab will no longer result in a "The payment information must be the same for both Transportation charges and Duty and Tax charges" error.
FIXED: Shipments: UPS: The Packaging Type field in the Package Options section will not revert changes made to it.
FIXED: Printing: Trying to print a ZPL document to a printer which uses ZDesigner drivers will not display a warning prompt. (Introduced: 1.2.0.35)
FIXED: Printing: If 'Automatically Print' is set to 'False', the app will not sometimes freeze when trying to print.
F**IXED:** Printing: If 'Automatically Print' is set to 'False' and 'Show ZPL Printer Compatibility Warning' is set to 'True', the ZPL printer compatibility check will occur after selecting a printer instead of checking the default printer before printer selection. (Introduced: 1.2.0.35)
FIXED: Shipments: Voiding a shipment will now release the source document lock.
FIXED: Package Chooser: The OK button will now select the highlighted package and close the window.

Version 1.2.0.35

Release Date 9/28/22

ADDED: Setting: Suppress No Fulfilled Lines Message - If set to 'True', suppress the popup message that alerts users when a shipment is being generated for a source document that does not have any fulfilled lines. Defaults to 'False'.

UPDATED: Shipping Source: Remote Library: Added Remote Library methods and utilities necessary to support Consolidated Shipment Operations.
UPDATED: Carrier: UPS: Setting: Send Extended Reference Fields to UPS - Determines whether or not reference fields 3-5 should be sent to the UPS API.
UPDATED: Shipment Monitor: If the Enable Sales Document Scanner Popup setting is true, do not cause the shipment monitor to automatically refresh its summary data when loaded.
UPDATED: Shipment Monitor: If the Sales Document Scanner Popup is opened, the scheduled summary data refresh will not run in the background until the Sales Document Scanner Popup is closed.

FIXED: Security Editor: When selecting a security group, scripts from the previous security group will not overwrite scripts from the selected security group.
FIXED: Shipment Editor: Clicking the Finish Shipment button while the shipment has a status of Shipping or Voiding will only cause the "Shipment Status Issue" prompt to appear only once when clicking Yes.
FIXED: Shipment Editor: Attempting to print a ZPL image on a printer that doesn't use a zebra printer driver will now open a prompt alerting the user of the potential printer incompatibility and requesting that the user confirm that they want to attempt to print the ZPL image on the incompatible printer.
FIXED: Shipment Editor: Opening an existing shipment that has a freight write to option of Sales Document Line pre-selected will now populate the Write Rate to Item Number dropdown.
FIXED: Shipment Monitor: Sales Document Scanner Popup: Attempts to retrieve consolidated shipments using the Sales Document Scanner Popup should no longer throw a null reference exception, rather the consolidated

shipment should now open in the Shipment Editor.
FIXED: Shipping Source: SalesPad GP: Finalizing a consolidated shipment that has a write-back method of sales line item will now create the appropriate sales line item on the source document, creating one new line item on each source document on the consolidated shipment if the Split Freight for Consolidated Shipments shipping source setting is true and creating one new line item on the first source document otherwise.
FIXED: Shipments: The Max Results and Hide Historical Shipments fields are now evaluated in SQL instead of within ShipCenter. This allows for those fields to affect how quickly the lookup loads and how many resources ShipCenter uses in the process. (Introduced: 1.2.0.33)

Version 1.2.0.34

Release Date 12/9/21

ADDED: Shipping Sources: Remote Library: An ITT workflow forward checkbox has been added to the Remote Library shipping source that should allow users to forward In-Transit Transfers in workflow upon shipment finalization.
ADDED: New Connection: Added the ability to import existing connections when creating a new SQL connection.

UPDATED: Shipping Source: Remote Library: Added UpdateSourceShippingMethod to support the ability to change a source document's shipping method
UPDATED: Shipping Source: Remote Library: Added UpdateShippingHeaderShippingMethod to support the ability to change a shipment license plate's shipping method.
UPDATED: Remote Library Shipping Source: Updated Service References to use new methods that will ensure the ShipCenter user is written to any sales document or in-transit transfer audits when operations are performed on the source document in ShipCenter.
UPDATED: Shipping Source: Remote Library: Added support for ITT objects in the Remote Library Shipping Source.
UPDATED: Shipping Source: Remote Library: Added ITT Status filter property to the Remote Library Shipping Source.
UPDATED: Shipping Source: Remote Library: Added support for direct auditing through the Remote Library Shipping Source.
UPDATED: Shipping Source: Remote Library: Added support for retrieving the list of unfulfilled source document lines in the Remote Library Shipping Source.
UPDATED: Shipping Sources: Attempts to acquire a lock on a locked sales document will now display a message to the user alerting them of the current lock holder.

FIXED: Shipments: Clicking 'Finish Shipment' when a USF Holland carrier is selected will not give an "There is an error in XML document (1, 2)" error.
FIXED: FedEx: Restored Package Count and Master Number fields on the FedEx shipping label.
FIXED: Remote Library Shipping Source: Writeback of Sales Document Line UDFs is now performed upon finalizing a shipment.

Version 1.2.0.33

Release Date 10/5/21

ADDED: Shipment Editor: Updated Shipment Properties to include account fields when Shipment Category set to Return Shipment. (Introduced: 1.2.0.33.182)

ADDED: Security: Shipments: Max Results Upper Limit - Sets the maximum value that the Max Results field can hold. If the value entered in the Max Results field is greater than the stated upper limit, then the Max Results field value will revert to the upper limit. (Default: 10000)

ADDED: ShipCenter Remote Library Integration: Logging for Remote Library Integration now triggered upon failures encountered while accessing Remote Library service data.

ADDED: ShipCenter Remote Library Integration: Remote Library Failed Call Retry Count property exists to configure number of Remote Library reattempts when the Remote Library service cannot be contacted.

ADDED: ShipCenter Remote Library Integration: Remote Library Failed Call Retry Delay Seconds property exists to configure number of seconds to delay the next Remote Library Service call reattempt.

ADDED: Carrier: Added DHL Express carrier.

ADDED: Security: Shipment Editor: Add Item to Package Script - C# script that is executed when an item is added to a package.

ADDED: Security: Shipment Editor: Closing Packing Screen Script - C# script that is executed when the packing screen is closing.

ADDED: Security: Shipment Editor: Direct Image Processing Script - C# script that is executed any time a direct image is sent to a printer.

ADDED: Security: Shipment Editor: Enable ShipCenter Core Packing Screen - Determine whether the Items button is enabled in the Shipment Editor. Disabling will restrict packing functionality to License Plating functions, DC Packing, or custom packing screens. (Default: True)

ADDED: Security: Shipment Editor: Generate Return Shipment Script - C# script that is executed as a return shipment is generated.

ADDED: Security: Shipment Editor: Package Changed Script - C# script that is executed any time the package is changed on the Shipment Editor.

ADDED: Setting: Cancel Subsequent Image Prints If Direct Image Processing Script Is Cancelled - If true, cancel attempts to print additional images if the Direct Image Processing Script causes a printed image document to be cancelled. (Default: True)

ADDED: Shipment Monitor: Added support for In Transit Transfer documents in the Shipment Monitor.

UPDATED: Shipment Editor: Performance increase while finishing the first shipment of a shipping source.

UPDATED: Application: DevExpress has been upgraded to 19.2.4.

UPDATED: Carrier: Added property that dictates whether or not a return document is automatically created once a shipment is finalized.

UPDATED: Carrier: FedEx: Added support for return to address tab.

UPDATED: Shipment Editor: Added tab control to allow addition of Shipment Editor formlets and converted the notes control into one such formlet.

UPDATED: Shipment Editor: Added support for Sales Line Item UDF writeback.

UPDATED: Shipment Editor: When acquiring a lock on a source document, also provide the user that currently has the source document locked if possible.

UPDATED: Shipment Editor: Added logic to allow manual string printing for ZPL printers to be called in scripting.

UPDATED: Shipment Editor: Added UI to alert the user when shipping labels are being printed during shipment finalization.

UPDATED: Shipment Monitor: Altered the shipment monitor to use a tab control that supports security control of which shipment monitors can be utilized for different source document origins.

UPDATED: Shipping Source: Added property to filter out ITT documents that aren't completely fulfilled.

UPDATED: Shipping Source: Added property to filter ITT documents by status.

FIXED: Shipments: Attempting to open an existing shipment that has no associated source document should no longer throw an unhandled exception.

FIXED: Shipment Editor: Double clicking the Finish Shipment button should no longer cause ShipCenter to run the logic to finalize a shipment twice.

FIXED: Get Rates: The legacy service will not incorrectly give errors such as "No packages in shipment" or "Missing Commodity". (Introduced: 1.2.0.29)

FIXED: Sales Document tax amount is no longer set to $0 for AvaTax tax schedules. (Introduced in 1.2.0.32)

FIXED: Shipments: When the shipment screen returns a maximum number of shipment results, the returned shipments will now be presented from newest to oldest.

FIXED: Shipments: Unhandled exceptions no longer appear if a user enters a value lesser than 1/1/1753 but

greater than 1/1/0001 for the start date.

FIXED: Shipments: Generating a return shipment for a historical sales document will now write notes, audits, UDFs, and tracking numbers to the historical sales document instead of giving an "Unable to load source document" error.

FIXED: Shipment Monitor: Non-inventory items will not cause a "Value for enum Type was not found" crash.

FIXED: Shipments: Choosing a different Shipment Service will not lead to the originally selected Shipment Service being written back to the sales document instead of the service which the carrier uses.

Version 1.2.0.32

Release Date 6/11/21

FIXED: Shipment Editor: When the 'Use Ground Home Delivery For Residential Destinations' setting is enabled, ShipCenter will not display the "This shipment qualifies for FedEx Home Delivery. Please resubmit your request with serviceType Ground Home Delivery." error when obtaining the shipment rate after the Shipment Amount button is clicked.
FIXED: Shipment Monitor: ASN was pulling for the wrong document compared to what had been selected when an auto-filter row was set.

ADDED: Setting: Added UDF mapping setting for the Sales Document's Carrier Name UDF.
ADDED: Setting: Added UDF mapping setting for the Sales Document's Shipping Billing UDF.
ADDED: Setting: Added UDF mapping setting for the Sales Document's Billing Account Number UDF.
ADDED: Setting: Added UDF mapping setting for the Service Transfer's Contract Name UDF.
ADDED: Setting: Added UDF mapping setting for the Service Transfer's Reference 1 Population UDF.
ADDED: Setting: Added UDF mapping setting for the Service Transfer's Reference 2 Population UDF.

Version 1.2.0.31

Release Date 4/8/21

UPDATED: GP Shipping Source: Write Actual Ship Date: The actual ship date will now also be written to the source document's lines upon finalizing a shipment.

ADDED: Shipping Sources: Remote Library Shipping Source: Adds a new shipping source option to communicate source document and shipment updates through the SalesPad Desktop Remote Library service. (Requires: SalesPad Desktop 5.1.5)
ADDED: Shipments: Search Options: Hide Historical: Adds a checkbox option for omitting historical shipments from search results.
ADDED: Shipments: Search Options: Max Results: Adds an option for specifying a max amount of search results to be returned. Defaults to 10,000.
ADDED: Shipments: Search Options: From and To Date Filters: Adds two date filters for narrowing shipment search results.

FIXED: Shipment Editor: The package template chooser will now correctly select templates created in SalesPad Desktop. (Introduced: 1.2.0.29)

Version 1.2.0.30

Release Date 11/25/20

ADDED: Setting: UPS Carrier: Display Negotiated Rate Notifications: Marking this 'False' will omit response alert messages from UPS regarding negotiated rates. (Default: True)
ADDED: Security: Shipments: Can Create Shipments: Adds a new security "Can Create Shipments" to control whether the 'New Shipment' button is enabled for a user.
ADDED: Security: Shipments: Can Edit Shipments: Adds a new security "Can Edit Shipments" to control whether the users will be able to edit shipments or open them as read-only.

FIXED: FedEx Carrier: Added missing SmartPost Hub IDs.
FIXED: RestSharp: Users will no longer experience issues related to the RestSharp assembly not loading version 104.4.0.
FIXED: Shipment Editor: Source Document Line: Fixed an issue that occurred while saving a shipment where the source document lines failed to insert because of a NULL source doc ID. (Introduced 1.2.0.26)
FIXED: Shipment Monitor: Open Shipment: Calculating the quantity packed on a shipment will no longer fail to convert null/empty values on a source document line.
FIXED: Shipments: Filtering on the Ship To Address and Ship From Address columns will no longer cause an "Invalid Column Name" error.

FIXED: Shipments: The Ship To Address and Ship From Address columns no longer require the Ship To Address ID and Ship From Address ID columns to be added to the grid to populate data.
FIXED: Shipment Monitor: Resetting a grid layout will now properly reset the row height back to the default size.
FIXED: Shipping Method: When editing shipping methods in GP 2010, an invalid column error will no longer occur.
FIXED: Scripting: Duplicate reference errors will no longer occur when a script is being compiled.
FIXED: Shipments: Attempting to open a shipment without a source document attached will no longer throw an object reference error. (Introduced v1.2.0.29)

Version 1.2.0.28

Release Date 5/27/20

FIXED: Shipment Editor: UPS label orientation is once again respected when labels are printed. (Introduced: 1.2.0.26)

UPDATED: ShipmentMonitor: Improved error messaging if ShipCenter encounters an issue with mapped shipping methods while generating a shipment.

Version 1.2.0.27

Release Date 5/4/20

FIXED: Shipment Editor: No longer throws an exception due to a "null" value being inserted into the Source Doc ID key field
FIXED: Shipment Monitor: Scanner Popup: Opening the Shipment Monitor screen will no longer throw an exception if the “Enable Sales Document Scanner Popup” setting is enabled.
FIXED: Shipments: Fed Ex Shipment Dry Ice Detail: Fed Ex Shipments will now correctly include the dry ice weight within its dry ice detail request.
FIXED: Package Editor: Package Editor will now correctly display/load a shipment's sales document kit component items.
FIXED: FedEx: If multiple account rates are given by FedEx, the correct one will now be used.
FIXED: FedEx Address Validation: Correct suite/apartment numbers on the first address line will now be moved to the second address line by address validation.
FIXED: Login: Server login errors/messages will now display properly centered within the dialog window.

Version 1.2.0.26

Release Date 3/10/20

FIXED: Shipments: Printing: Fixed an issue that caused the 'Print' option to not be available when printing labels/reports for a shipment.
FIXED: Printing: Bill of Lading: Fixed an issue that caused ShipCenter to crash when printing a bill of lading from a shipment.
FIXED: FedEx: If multiple account rates are given by FedEx, the correct one will now be used.

UPDATED: Shipment Editor: When sending an international shipment through UPS, the 'Commodities' (located in the 'Customs' tab of the shipment options) will now have its unit price defaulted to match the unit price of the sales line.
UPDATED: Stamps.com Package Options: Added 'Thick Envelope', 'Large Envelope or Flat', and 'Oversized Package' package types.

FIXED: Shipment Monitor: Selecting a shipping source from the source grid (or the shipping source dropdown) updates the 'Scan Order' popup and shipment grid as expected.

Version 1.2.0.25

Release Date 1/13/20

FIXED: Stamps.com: First Class Mail labels will no longer print with a question mark character.
FIXED: Purolator: Labels are now requested using only the shipment PIN, instead of each individual package PIN.

ADDED: FedEx: Address validation: Addresses will now be marked as residential if it can be determined by the validation.

Version 1.2.0.24

Release Date 11/8/19

UPDATED: Carrier Card: Printer defaults are now configurable per machine, and per carrier.
UPDATED: The default printer setting now determines what the initial default printer will be on the carrier card, before it is configured for an individual machine.

FIXED: FedEx: If a shipment's Account Option is changed to 'Collect' after the shipping charges have been populated, there will no longer be an error when finishing the shipment.

Version 1.2.0.23

Release Date 10/31/19

UPDATED: Shipment Monitor now loads documents faster.

FIXED: Packing Items: Items that were packed in DataCollection will now display the correct Quantity Packed.

Version 1.2.0.22

Release Date 10/7/19

FIXED: FedEx: Domestic Canadian shipments will no longer result in an Invalid Currency error if no Declared Value is entered.

Version 1.2.0.21

Release Date 8/16/19

FIXED: ShipCenter Service: The Residential Delivery flag now works correctly with the ShipCenter Windows service.

Version 1.2.0.20

Release Date 7/22/19

FIXED: FedEx: The Residential Delivery flag is now included in rate requests, so Ground Home Delivery rates will now be included in rate shopping results for residential delivery shipments.

Version 1.2.0.19

Release Date 6/25/19

ADDED: Hotkey Mappings: Hotkeys may now be configured to perform certain tasks in the Shipment Editor screen.

FIXED: Shipment Editor: Reference fields are no longer overwritten by the Source Line Field Mappings when closing the Packing screen.
FIXED: When printing labels for a shipment that failed to save correctly, labels from previous shipments with the same issue will no longer print as well.
FIXED: Shipment Options: When the shipment service is UPS Mail Innovations, the Invoice Line Total field will now be displayed correctly in the customs tab of the shipment options.
FIXED: UPS: For UPS Mail Innovations shipments, leaving the Cost Center reference field blank will no longer cause an error.
FIXED: UPS: Leaving the Ship To or Ship From phone number fields blank will no longer cause an error.

Version 1.0.2.18

Release Date 5/29/19

FIXED: Integrations: SalesPad Desktop: When the SalesPad Tax Query handler is Thomson Reuters, sales document tax will no longer be cleared after processing a shipment.
FIXED: Purolator: Labels are now retrieved once instead of duplicated for each package in the shipment.
FIXED: Logging out before interacting with a Shipping Source and then logging back in will no longer throw an unhandled exception upon interacting with a Shipping
