Signature Pad

Megan De Freitas - 2025-06-25 - Setup

Overview

The signature pad module in SalesPad will allow a user to capture signatures on sales documents via a touchscreen device or a Topaz device. SalesPad currently supports the T-S460 model.

Note: For versions prior to 4.6.0.23, in order to use the signature pad functionality, you must install the Signature Pad .dll, which is available for free. Versions after will see this .dll already included and installed. If you need this file, please <u>contact Cavallo Support</u>. In addition, you must have Microsoft's <u>Handwriting and Ink</u> feature installed.

Signature Pad Setup

After installing the Signature Pad .dll, open the Signature Setup tab.

The Signature Setup tab is where you can create different Signature Reasons associated with Sales Doc Types. To add a Signature Reason, select the Sales Doc Type you want the reason associated with and click the **Add** button in the upper left-hand corner of the Signature Reason field.

📑 Close 🛛 🛃 Save		
Sales Doc Type	Sales Doc ID	🖶 Add 💢 Delete 🥥 Mark As Obsolete 🔊 Revive Obsolete 🗌 Show Obsolete

Signature Reason	Obsolete
Invoice	
Receipt	

To make an obsolete reason no longer obsolete, select that reason and click **Revive Obsolete**.

Using the Signature Pad

When creating a sales document, a user can select the Sales Document Signature Pad plugin, as shown below. A pop-up menu will allow the user to sign and click **OK**. The signature is then saved to the database, and will show up if the plugin is opened again on the same sales document. This plugin is also available for counter sales.

Once you've selected the correct Signature Reason, use the Touch Screen field below to record the signature and click \mathbf{OK} .

Security

Under *Sales Document Signature* in Security, check *Sales Document Signature Pad* to enable the Signature Pad module. There is also a sub-setting that will allow a user to select whether they are using the Topaz pad or a touch screen device.

⊿ Mis	sc			•			
Sig	nature (Capture Type		Touch Screen			

The signature pad should be configured according to the instructions pertinant to the device being used, and should be tested with the manufacturer's software before using it in SalesPad. No further configuration is required from within SalesPad.

You will also want to enable the *Topaz Sales Document Signature* and *Touch Screen Sales Document Signature* securities.
