What happens when you have multiple workflow rules evaluating the same batch?

Cavallo Support - 2025-06-10 - FAQ

You can have more than one Workflow rule per batch, but once a rule evaluates as true, the document will not continue to the next rule. For example, if you have three rules on a batch and the first rule is false but the second is true, the system will perform the actions for the second rule and not proceed to rule three. Be sure to utilize the sequence field when creating your rules to ensure that your rules are firing off in the order you intended them to.
