## Workflow Setup

Megan De Freitas - 2024-12-03 - [Miscellaneous](#)

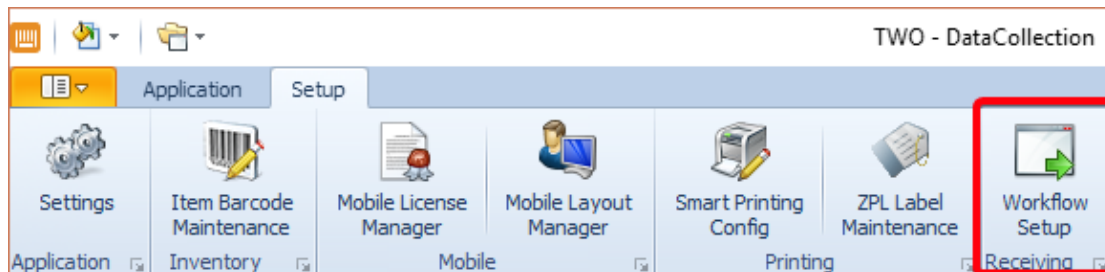

### Overview

The Workflow Setup screen allows users to create logic/rules to automatically stage, flag, or move receiving documents through the system, based on business needs. Workflow Setup allows users to create a sequence of queues (equivalent to batches in Dynamics GP) for different business objects such as receipt documents, inventory, etc. These queues can be used to allow various types of orders to be processed differently, and make it easy for users to manage documents, keep track of a document's status, and take action based on its status in the business workflow.

### Setup

To open Workflow Setup, click the Setup tab and click **Workflow Setup**.

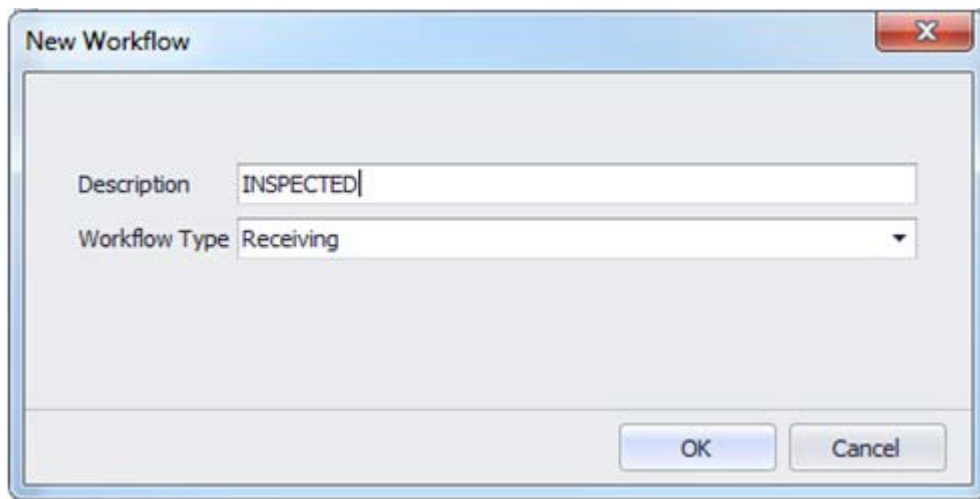

**Note:** Creating Receiving queues in DataCollection does not create batches with the same name in Dynamics GP.

To set up workflow in DataCollection, follow the steps outlined below.

### Add Workflow Types

1. Under Workflows, click **New**.
2. The New Workflow screen appears. Select the Workflow Type (only Receiving is supported at this time). Choose Receiving and enter a description.
3. Repeat these steps to create additional Workflow Types if needed.

The 'New Workflow' dialog box has a title bar with a close button (X). Inside, there are two input fields: 'Description' with the text 'INSPECTED' and 'Workflow Type' with a dropdown menu showing 'Receiving'. At the bottom right are 'OK' and 'Cancel' buttons.

#### Add Workflow Batches

Workflow Batches			
<div> <span>+ New</span> <span>✖ Delete</span> </div>			
Seq ▲	Workflow Batch	Forward Label	Forward To Batch
10	NEW	SHIPPED	SUPPLIER SHIPPED
20	SUPPLIER SHIPPED	HOLD	FDA HOLD
30	FDA HOLD	SAMPLE	READY TO SAMPLE
40	READY TO SAMPLE	APPROVE	APPROVED
50	APPROVED	RECEIVE	RECEIVED
60	RECEIVED		

1. After adding Workflow Types, select a Workflow Type for which to create a new Workflow Batch.
2. Click **New** under Workflow Batches to create a Workflow Batch for the selected Workflow Type. A new line will appear.
3. Enter the Workflow Batch name.
4. Enter the Forward Label. This is the name of the button on the document that releases the document to the next queue.
5. Enter the Forward To Batch. This is the batch a document in the current batch will be forwarded to as the next step in the workflow.
6. Repeat steps 2 and 3 to create additional Workflow Batches for the Workflow Type. The name in the Forward To Batch field on the previous line should be used as the Workflow Batch name on the next line. For the final queue, a name will not be entered under Forward To Batch.
7. Click **Save**. After completing a workflow for the selected Workflow Type, repeat steps 2 through 5 for additional Workflow Types.

**Note:** Use the **Delete** button under Workflow Types or Workflow Batches to delete a selected workflow type or batch.

#### Security

*Workflow Setup* - Grants access to the Workflow Setup module.
